SMT Reflow Soldering Instructions

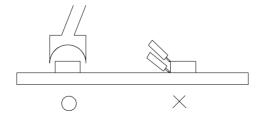

- 1.Reflow soldering should not be done more than two times
- 2. When soldering, do not put stress on the LEDs during heating

Soldering iron

- 1. When hand soldering, the temperature of the iron must less than 300°C for 3 seconds
- 2. The hand solder should be done only one times

Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of LEDs will or will not be damaged by repairing.
